

McAfee GroupShield for Lotus Domino

Industrial Strength Content Security for Lotus Domino

McAfee® GroupShield® for Domino provides industrial strength anti-virus and content security for Lotus Domino. Using McAfee's award-winning virus scanning engine, GroupShield installed on your Lotus Domino Server prevents viruses and other malicious code, including Internet worms, Web attacks, and infected email. GroupShield also provides comprehensive content filtering and McAfee's "unique" Outbreak Manager™, giving you a truly pro-active virus defense. Outbreak Manager is like having a 24-hour administrator onsite and ready to take action in the event of a virus outbreak or unusual activity, adding a new dimension to your network defense strategy.

ePolicy Orchestrator™ Integration

Enhanced Manageability and Graphical Reporting

GroupShield is integrated with McAfee ePolicy Orchestrator™, offering strict anti-virus compliance and enterprise reporting and management—giving you a bird's eye view of your anti-virus security policy. GroupShield integrates with ePolicy Orchestrator, one of the only truly scalable security policy management tools, for policy management, detailed graphical reporting, and software deployment. ePolicy Orchestrator enables administrators to ensure their networks are protected by one of the most effective anti-virus solutions in the market today.

Determining the effectiveness of your GroupShield in your virus security policy is effortless with ePolicy Orchestrator and its wide array of pre-defined reports, including information on update deployments and virus activity. And as the most difficult aspect of implementing and proactively managing a virus security policy is getting the visibility you need to evaluate your policy's effectiveness and find your network's weak points, customizing reports to suit your specific needs is easy.

Rules Trigger Action

Stop Outbreaks Before They Start

McAfee's unique Outbreak Manager uses breakthrough anti-virus technology that automatically stops outbreaks before they start. It searches for new attacks by looking for

activities typical of new virus outbreaks. Outbreak Manager can be instructed to operate in either automatic or manual modes. In manual mode when a virus outbreak is detected, Outbreak Manager will inform the email administrator, who can then determine what action is required to contain the outbreak. Alternatively, Outbreak Manager can run in automatic mode, in which case if an outbreak is detected, it will perform a number of predetermined tasks to secure the email environment against possible infection, requiring no manual intervention.

Content Filtering

GroupShield prevents unsolicited or hostile messages or files from entering your Lotus Domino users' environment by allowing you to specify content filters based on the following criteria:

- File extensions
- File names
- File sizes
- Subject line content
- Message body content

Any message item found to match a content filter description is automatically blocked and quarantined. The extensive content filtering abilities of GroupShield allow the administrator to add wild card statements or even multiple rules.

McAfee Detection and Cleaning Engine

Unbeatable Virus Detection and Cleaning

Like all McAfee anti-virus products, GroupShield is based on the award-winning McAfee scan engine. Repeatedly recognized by independent testing organizations as the world's leading virus detection and cleaning technology, the engine stops every type of virus and malicious code threat, including macro viruses, Trojans, Internet worms, advanced 32-bit viruses, and even hostile ActiveX and Java objects. McAfee has an enviable track record in third-party tests for delivering effective detection and cleaning. Sporting the McAfee engine, GroupShield also enjoys the benefits

McAfee GroupShield for Lotus Domino

Industrial Strength Content Security for Lotus Domino

of McAfee's advanced detection and cleaning technology. This technology enables GroupShield to deliver protection against new, unknown threats before their appearance in the field, without a false alarm problem. Only McAfee can provide the technology to deal with the speed of today's virus attacks.

Always Up-to-Date

GroupShield features AutoUpdate, which enables the latest Virus definition (DAT) files to be automatically downloaded via FTP or network file share. This automated server-side function ensures you will always be up to date with the latest DAT files from McAfee.

Web Management

Manage from Anywhere

GroupShield provides an HTML interface that can be used to configure and manage GroupShield remotely, on one or more servers from one central location

Alerting

Allows administrators to configure a wide variety of system alerts, each can be selectively enabled, filtered and prioritized. GroupShield is also integrated with McAfee Alert Manager™ letting you easily create sophisticated notification policies that alert multiple administrative functions. Alerts can be sent via email, pager, Microsoft event logger and network messages.

Lightning-Fast Scanning Performance

In-Memory Scanning

GroupShield for Lotus Domino scans items in RAM without having to write them to disk. This enables GroupShield for Lotus Domino to perform lightning fast scans, reduce the impact to users and still provide reliable secure scanning.

Simple Set-Up and Deployment

Email administrators need to understand their Lotus Domino environment and need to know that the installation process will be smooth and uneventful. GroupShield 5.2 for Lotus Domino provides just that—a dependable installation and an easier deployment than ever before.

Incremental On-Demand Scans

GroupShield Incremental Scanning eliminates redundant scanning by only scanning documents created or updated since the last scheduled scan. Administrators can further fine-tune performance and balance server workload by setting the CPU priority for scheduled and on-demand scans.

System Requirements

Note: Actual requirements will vary depending on the nature of your environment.

Memory

- 64MB and 140MB paging space

Disk

- 300MB free hard drive space for Lotus Domino 4.6.x
- 700MB free hard drive space for Lotus Domino 5.0.x

OS Platforms

- Microsoft Windows NT 4.0 SP6+
- Microsoft Windows 2000 Server SP3+
- IBM AIX 4.3.2 or 4.3.3

Lotus Domino

- Lotus Domino 4.6.6+
- Lotus Domino 5.0+

Additional Software

- Microsoft Internet Explorer v4.0+
- Netscape Communicator v4.5+

Other Hardware Requirements

- Pentium 200MHz or faster

All Network Associates products are backed by our PrimeSupport® program and Network Associates Laboratories. Tailored to fit your company's needs, PrimeSupport service offers essential product knowledge and rapid, reliable technical solutions to keep you up and running. Network Associates Laboratories, a world leader in information systems and security, is your guarantee of the ongoing development and refinement of all our technologies.
