

McAfee SpamKiller for Mail Servers

Stop spam at your mail servers

Spam—unwanted, unsolicited e-mail—consumes precious space on your mail servers, wasting your bandwidth and network storage. It also distracts your users from their work.

McAfee® can help. McAfee SpamKiller® for Mail Servers helps keep your Microsoft® Exchange and Lotus Domino mail servers free of spam, phishing, and inappropriate content. SpamKiller for Mail Servers scans inbound e-mail and filters out spam as it reaches the mail server. Spam e-mail can be deleted immediately or quarantined to a server-based or a user-based junk-mail folder. With SpamKiller for Mail Servers, you save space on your mail server, increase employee productivity, and reduce your company's exposure to potential liability issues.

Industry-Leading Protection

Your protection is kept current with streaming updates that automatically download to your e-mail servers every ten minutes. Third-party tests show that SpamKiller for Mail Servers consistently blocks over 95 percent of spam. As a result, McAfee anti-spam technologies received the prestigious Checkmark Premium Anti-Spam certification by West Coast Labs, their highest level of certification.

McAfee SpamKiller

Integrated Anti-virus Protection

SpamKiller for Mail Servers easily integrates with McAfee GroupShield® for Mail Servers (available separately). Your business is protected from today's threats—viruses, spam, phishing, and inappropriate content.

Multiple Anti-spam Technologies

- Integrity analysis examines the header, layout, and organization of each e-mail message and identifies common spam characteristics for accurate spam detection
- Heuristic detection provides protection against first-time spam
- Bayesian filtering intelligently assesses your e-mail messages for spam and non-spam based on criteria specific to your business
- Content filtering uses keywords, phrases, and embedded URLs to identify spam e-mail
- Blacklists and whitelists let your administrator set the standards for spam messages
- Self-tuning feature learns the characteristics of the e-mail your organization receives and adjusts the overall spam rating for known senders

Scalable Management

SpamKiller for Mail Servers leverages your security investment in McAfee ePolicy Orchestrator® (ePO™). ePO is the centralized authority to enforce protection. Comprehensive, detailed, graphical reports from ePO keep you informed of your security posture.

In addition, ePO provides remote deployment, so that large enterprise rollouts can be managed easily from a central location.
