

## Websense

# Hosted Web Security

Today's Internet threats are more invasive and abundant than ever before, and the nature of attacks is constantly changing. In fact, according to Websense® Security Labs, over 60 percent of the top 100 sites have either hosted malicious content or contained a masked redirect to an illegitimate site.

The most popular sites are becoming Web 2.0 enabled, bypassing legacy security systems. Websense Hosted Web Security understands the dynamic nature of the new Web, enabling businesses to build enforceable usage policies without having to block these new revolutionary tools.

As a result, Websense Hosted Web Security lets customers take full advantage of the power of Web 2.0 technology without sacrificing security, productivity, or control. The hosted security model provides reduced business costs and complexity with centralised management for remote employees and distributed office locations. With Websense Hosted Web Security, customers gain mission-critical security while enabling a consolidated security strategy with the trusted leader in Essential Information Protection™.

### How It Works

Acting as a proxy, Websense Hosted Web Security proactively discovers and blocks Internet threats and helps enforce employee Internet usage with no need to deploy on-premise equipment. It's easy to deploy for organisations of all sizes, and uses Websense global data centers, which are load-balanced, highly available clusters positioned in 10 locations worldwide. The hosted service is certified to ISO 27001 standards, providing the

highest degree of security, privacy, and confidentiality, and is backed by industry-leading SLAs to ensure uptime and availability.

Websense Hosted Web Security works hand-in-hand with Websense Hosted Email Security to provide integrated email and Web protection, enabling organisations to optimise email use and to safely use Web 2.0 technology.

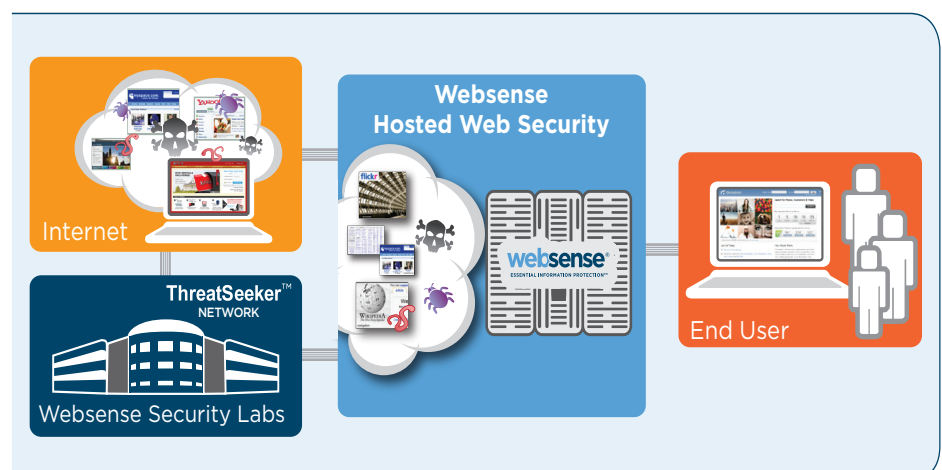

Websense Hosted Web Security enables customers to:

- **Reduce business costs and complexity** with no on-site equipment to install or maintain, eased administrative overhead, and built-in scalability, enabling Web gateway consolidation
- **Increase protection** with the Websense ThreatSeeker Network™ and to safely leverage the power of Web 2.0 technology
- **Retain control** with 24x7 access and flexible customisation of policies, configuration settings, and reporting

“One of the best things about Websense is its continued investment in innovative security. I honestly can't imagine what our security posture would be like if we didn't have products backed by the Websense ThreatSeeker Network, which is the best set of security categorisation and detection technologies we have seen available on the market.”

**Beth Cannon**

Chief security officer  
Thomas Weisel Partners

Websense Hosted Web Security provides centralised Web malware protection and granular Web filtering.

## Websense ThreatSeeker Network

The Websense ThreatSeeker Network adaptive security technology uses more than 50 million real-time data collecting systems that continuously monitor Internet content—including new and dynamic content—for zero-hour protection from emerging threats. This research and intelligence is fed, in real-time, to the Websense solutions portfolio. As a result, Websense is able to adapt to the rapidly changing Internet at speeds not possible by traditional security solutions.

## Summary

Websense Hosted Web Security lets you safely take advantage of the power of Web 2.0 technology without sacrificing security, productivity, or control—all with reduced cost and complexity offered through the hosted security model.
